

InnovateNow!

TeleMed

Veronica Mordvinova and Jeremy Friesen

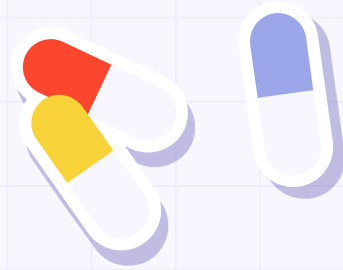

Table of contents

01

Initial Idea

A brief description of the idea behind the application

03

Details

How the application is going to end up working!

02

Development Goal

How our idea relates to a development goal

04

Long-Term Goals/Ideas

01

Initial Idea

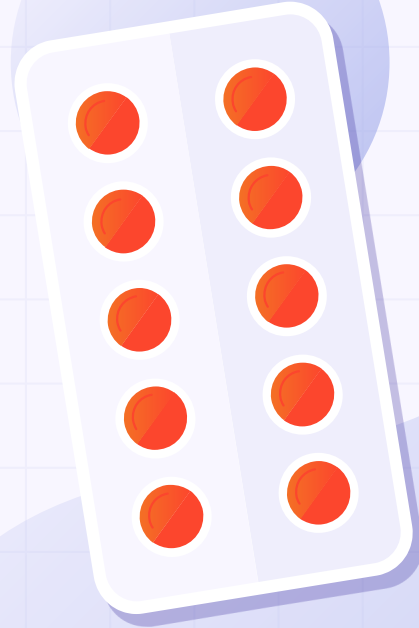

So... What is the Plan?

Creating a telemedicine application aimed at regions where medical services might not be readily available, making physical medical services more accessible - preventing unnecessary fatalities.

02

Relation to Selected Development Goal

The background of the slide is a collage of various pharmaceutical products. It includes several blister packs containing capsules and tablets. The capsules are in various colors: orange, blue, red and white, and white. Some are oval-shaped, while others are round. The blister packs are made of a metallic, foil-like material. The overall image conveys a sense of medical care and healthcare.

Selected Goal - Goal 3

“Ensure healthy lives and promote well-being for all at all ages”

How did we relate to this development goal?

Online Application

Guarantees that physical location will not be an issue when consulting

Free Services

Helping those who may not have the financial means to seek out health services in their region

03

Application — Details

Hypothetical Inner Workings

Step 1 - User Account

User inputs critical information
→ Name, Age, Address, etc.

Registration
Username:
Password:

Step 2 - Selection of Type of Care

Asynchronous

→ Symptom survey - medical professional reviews, sends additional questions - makes care plan

Synchronous

→ Online chat
→ Video call

Hypothetical Inner Workings

Step 3 - Follow-Up

Approx. a week after care plan sent - medical professional will check up with the user to see if care plan working

Step 4 - Information Storage

Medical information - stored for future reference/to aid future diagnosis

Included Features

→ Account Creation

- Password protection - password guidelines
- Data encryption - preventing stolen information

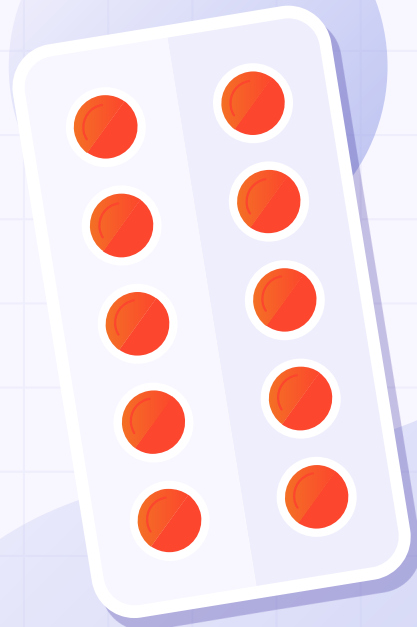

→ Knowledge Network

- Connection to local treatment centers - if condition found critical
- Find a pharmacy - helps user find the most accessible pharmacy - if a prescription is part of the care plan

04

Long term plans and goals

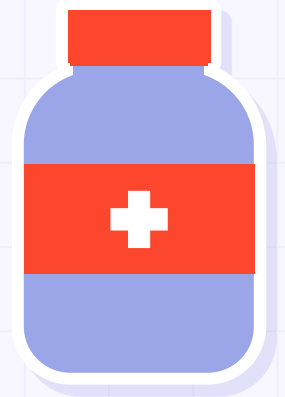

Accessibility

- Expand the platform through various countries
- Implement different languages/services available
- Make medical services more available in remote regions

Sponsorship Program

- If user required immediate care → could be very expensive
- In order to offset cost, and to prevent possible death - users could apply to get their medical costs reimbursed
